

intercable

Innovations 2020

ABI 1

Wide range of applications: Ø 4,5mm to 29mm

Suitable for soft and hard insulation types of cables

Hardened steel blade

Round, longitudinal and spiral cuts possible

No tilting due to axial pulling of the device in the longitudinal direction

Thanks to the special sliding properties of the contact surface, resistance-free working on the cable is guaranteed

Cutting depth in increments of 0.1mm to 3mm adjustable using the rotary knob (clockwise)

No damage to the underlying layers

Small and compact design

Handy & ergonomic design

Use for round / spiral cuts

Unlock the cable stripper by turning the adjusting ring to the round-cut symbol (●)

Tension the tool to the cable using spring force

Regulate the cutting depth by turning the adjustment knob (clockwise)

Place the tool on the marking of the stripping length and make the round cut

Shift the adjusting ring to the spiral-cut symbol (⊙) to fulfil the working process

Use for longitudinal cuts

For the longitudinal section, switch the adjusting ring to the longitudinal section symbol (→) and pull the device axially in the longitudinal direction
